

Step 1. create html file ✓

2. create javascript file ✓

3. create css file ✓

↳ basic structure of a HTML file ✓
↳ connect the javascript + css file ✓

↳ write the heading (To do list) ✓

↳ message for the initial "look" ✓

↳ a list item element (ul) ✓

↳

add to a list element DOM

2. on an empty array for the list
↳ code for adding a new task

↳ code for removing a task

the priority of a task

moving

the list for next time I want to add a task

↳ code for saving

↳ code for saving

properties
text
id

task + event listener

create a field that a task can be received (prompt)

received event is received

when an event is received

get it and push it to the array

pushed a new

5. create a file for needed documentation for the project

maybe my file because it's a file I'll add the functions
